CANCER RESEARCH

PREFACE

This brochure provides a first insight into research in Germany in the field of cancer research and is especially recommended to early career researchers from abroad.

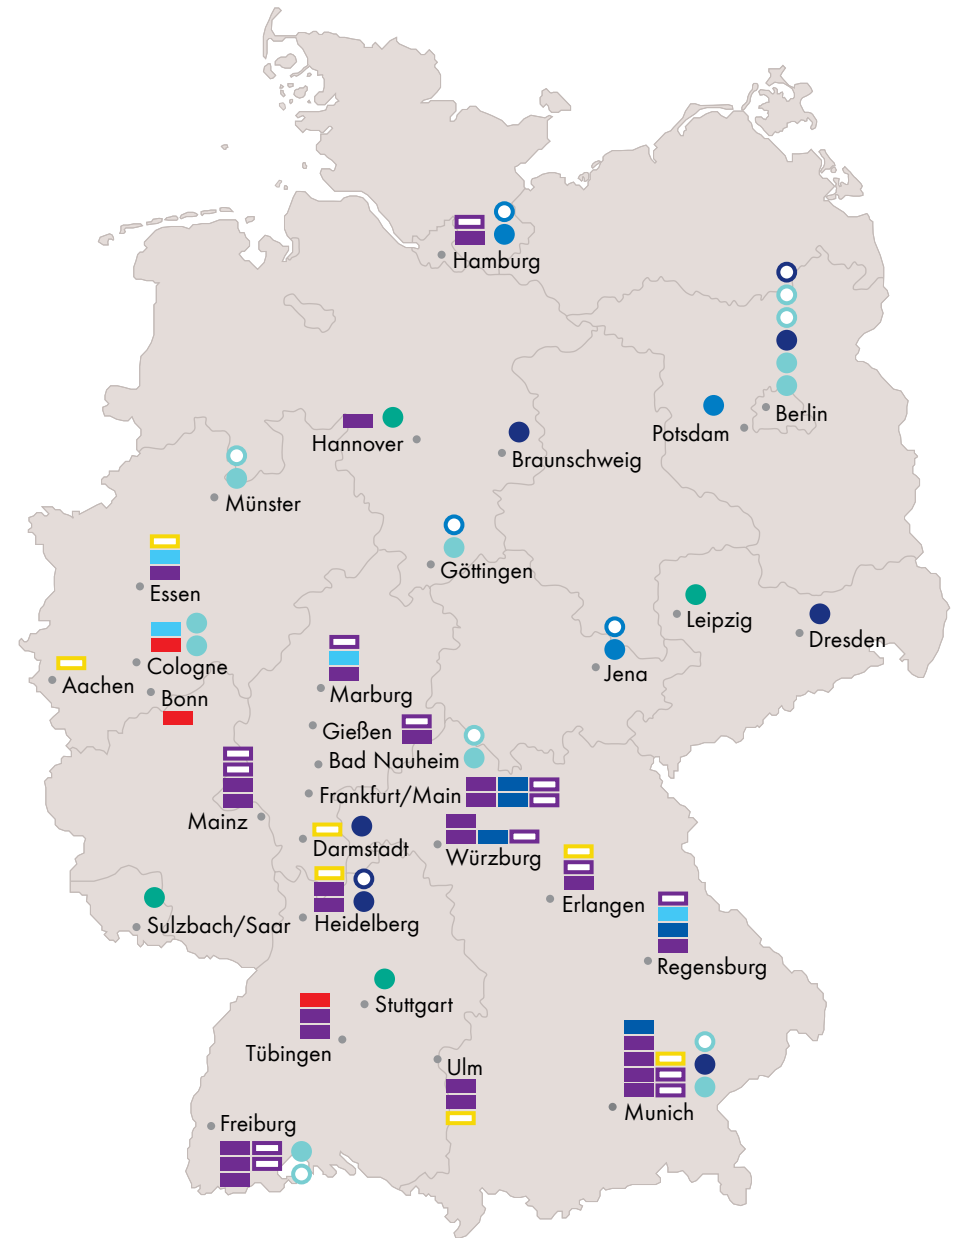

Cancer research in Germany is conducted at universities and also at non-university research institutions. Almost all universities host a cancer research section. The spectrum ranges from small monothematic working groups to large interdisciplinary departments and covers a variety of topics from traditional areas to new explorative research fields.

This brochure is intended to give an initial overview. The following map and tables highlight research consortia and graduate training programmes at universities and non-university research institutes with a main focus on cancer research. Medical and clinical research centres are not included.

On top of this, there is a lot more to discover: e.g. the DFG funds a multitude of individual projects in the area of cancer research. These individual grants outweigh the research consortia both in number and in overall funding volume. Towards the end of this brochure, you will find a link to the online database GEPRIS that provides an overview of all DFG-funded research projects. You will also find additional important links for further information about programmes in the field of cancer research and profiles of German universities and research institutions.

We invite you to explore the many opportunities that Germany has to offer and welcome your feedback.

OVERVIEW

 Research Training Groups	 Helmholtz Graduate Schools
 Integrated Research Training Groups in Collaborative Research Centres/Transregios	 Leibniz Graduate Schools
 Clinical Research Units	 International Max Planck Research Schools
 Research Units	 Fraunhofer Institutes
 Clusters of Excellence	 Helmholtz Centres
 Collaborative Research Centres/Transregios	 Leibniz Institutes
	 Max Planck Institutes

DFG-funded Priority Programmes and several Research Units are not shown on the map since they are not necessarily located at a single location; they are listed on pages 13 and 17. The map shows the headquarters of the non-university research institutions.

CENTRES OF RESEARCH

- FUNDED BY DFG -

Clusters of Excellence (EXC) promote cutting-edge research. They serve to strengthen the research profiles of universities or university consortia in internationally competitive fields. They create excellent training and career opportunities for early career researchers. Within the framework of the Excellence Strategy, they can receive between €3 million and €10 million annually and are funded for seven years, starting in 2019. A second seven-year period is possible.

Collaborative Research Centres (CRC) are organisational units established at universities which enable researchers to pursue an outstanding research programme crossing the boundaries of disciplines, institutes, departments and faculties. The traditional Collaborative Research Centre is generally applied for by one university and is conducted by researchers of that university. Early career support is a key objective of the Collaborative Research Centre Programme. Early career researchers may get involved in a CRC in numerous ways, for example within the framework of an Integrated Research Training Group. Collaborative Research Centres are funded for a period of up to 12 years.

Transregios (TRR) are Collaborative Research Centres in which up to three universities collaborate with each other and submit a joint application. The contributions of the cooperative partners are essential, complementary and synergetic to the joint research objective. Funding facilitates close, nationwide collaboration among the participating universities and researchers, as well as networking and shared use of resources. There is also the option of international Transregios.

RESEARCH UNITS

-FUNDED BY DFG-

Research Units (FOR) contribute to establishing new research directions. Research Units are made up of a team of researchers working together on a research project which is often of an interdisciplinary nature. Research Units consist of several researchers and subprojects. The subprojects of a Research Unit can be located at several locations throughout Germany. Research Units are generally funded for up to six years.

In case most of a Research Unit's subprojects are located at one place, it is represented in the map.

RESEARCH UNITS

Title	Funded Since	Contact
Aging-Related Epigenetic Remodeling in Acute Myeloid Leukemia (FOR 2674)	2017	http://gepris.dfg.de/gepris/projekt/336840530
Cell Plasticity in Colorectal Carcinogenesis (FOR 2438) Subprojects mainly located in: Frankfurt/Main	2016	www.for2438.de
Targeting Therapeutic Windows in Essential Cellular Processes for Tumor Therapy (FOR 2314) Subprojects mainly located in: Würzburg	2015	www.biozentrum.uni-wuerzburg.de/for2314
Selection and Adaptation during Metastatic Cancer Progression (FOR 2127) Subprojects mainly located in: Regensburg	2014	http://for2127.de
The Hematopoietic Niches (FOR 2033) Subprojects mainly located in: Munich	2013	www.for2033.med.tum.de
Mature T-Cell Lymphomas - Mechanisms of Perturbed Clonal T-Cell Homeostasis (FOR 1961) Subprojects mainly located in: Frankfurt/Main	2013	www.control-t.de

CLINICAL RESEARCH UNITS

-FUNDED BY DFG-

Clinical Research Units (KFO) promote close collaboration between highly qualified scientists working on thematic projects within clinical institutions. They are generally established for a period of six years. Clinical Research Units pursue clinical investigations, integrate clinical findings, and may conduct clinical pilot studies. They focus on translational research with patient-oriented approaches and on understanding disease mechanisms. Clinical Research Units are usually located at one institution.

CLINICAL RESEARCH UNITS

Location	Institution	Title	Funded Since	Contact
 Cologne	Universität zu Köln	Exploiting Defects in the DNA Damage Response for the Development of Novel, Targeted CLL Therapy (KFO 286)	2013	www.cll-research.org

 Regensburg	Universität Regensburg	Tumor Metabolism as Modulator of Immune Response and Tumor Progression (KFO 262)	2011	www.tumormetabolism .com

PRIORITY PROGRAMMES

- FUNDED BY DFG -

Priority Programmes (SPP) have a programmatic focus and the purpose of advancing knowledge in an emerging field of research through collaborative networked support. They are characterised by their enhanced quality of research through the use of new methods and forms of collaboration in emerging fields. As a rule, one programme can consist of up to 30 individual subprojects located at several institutions across Germany; it usually has one coordinating person. Priority Programmes normally receive funding for a period of up to six years.

Priority Programmes are not shown on the map. Only the titles of the overall theme and the project website are listed.

PRIORITY PROGRAMMES

Title	Funded Since	Contact
μ BONE: Colonization and Interaction of Tumor Cells within the Bone Microenvironment (SPP 2084)	2018	www.uniklinikum-dresden.de/de/forschung-lehre-und-bildung/ubone

Fraunhofer Society is one of the world's leading organisations for applied research with an annual research budget of 2.5 billion euros, 72 institutes and more than 26,600 employees. Fraunhofer's R&D portfolio covers a wide range of fields, including health, security, communications, transport, energy and the environment. www.fraunhofer.de

The Helmholtz Association contributes to solving major challenges facing society, science and industry with world-level research in six areas: energy, earth and environment, health, key technologies, structure of matter and aeronautics, space and transport. With more than 40,000 employees in 18 research centres and an annual budget of approximately 4.7 billion euros, the Helmholtz Association is Germany's largest scientific organisation. www.helmholtz.de

The Leibniz Association is an umbrella organisation of 93 research institutes. The annual budget amounts to 1.93 billion euros. Some 9,800 researchers – approximately 20% of them from abroad – work on a widely diverse range of subjects, including the humanities and social sciences, economics, spatial and life sciences, mathematics, natural and engineering sciences and environmental research. www.leibniz-association.eu

The Max Planck Society for the Advancement of Science is one of Germany's largest independent non-profit research organisations. The Max Planck Society has been allocated approximately 1.7 billion euros for 2018. A combined total of 15,600 researchers, postdoctoral/junior researchers and visiting researchers at 84 Max Planck Institutes conduct basic research in the natural sciences, life sciences, social sciences and humanities. One third of the researchers and more than half of the junior and visiting researchers come from abroad. www.mpg.de

GRADUATE TRAINING

- FUNDED BY DFG -

Research Training Groups (RTG) combine an ambitious research programme at universities with comprehensive training, tailored supervision and academic freedom to form an ideal environment for a successful doctorate. Research Training Groups can also have an interdisciplinary approach. They are funded for a period of up to nine years.

International Research Training Groups (IRTG) provide opportunities for joint doctoral training programmes between German universities and universities abroad. The research and study programmes are jointly developed and supervised. Doctoral students in the programme spend six months at the partner institution.

Integrated Research Training Groups (within Collaborative Research Centres/ Transregios) offer ideal research environments for doctoral researchers. The main aim of these structured training programmes is to provide young scientists and academics with opportunities to independently carry out research at an early stage of their career. The programmes further take care to closely integrate early career researchers into an academic network. Working in Clusters of Excellence or Collaborative Research Centres projects, doctoral researchers achieve additional qualifications. As research assistants in these projects, they contribute to the Research Centre's success. They are closely involved with the projects and have access to the entire project infrastructure.

GRADUATE TRAINING

- AT NON-UNIVERSITY RESEARCH INSTITUTIONS -

Helmholtz Graduate Schools provide a roof under which a varied number of curricula in different fields, or across disciplines, can find a home. Helmholtz Graduate Schools constitute a valuable addition to the wide range of training programmes available within the Helmholtz Association. They offer optimal conditions for PhD students to work and enable them to create a network of contacts with fellow university researchers while also fostering the integration of participants into the research environment.

Leibniz Graduate Schools were established to foster the systematic promotion of junior researchers. Young researchers are given the opportunity to do their doctorates in an excellent, collaborative, cross-disciplinary research environment. To this end, Leibniz institutions cooperate closely with universities. As every Leibniz institution focuses on clearly defined, socially-relevant themes, doctoral candidates have a wealth of networking opportunities in a large, dedicated scientific community. The particular character of research at the institutions in the Leibniz Association, which includes fundamental, large-scale and application-oriented research, means doctoral candidates can conduct research from basic idea right through to application.

International Max Planck Research Schools (IMPRS) offer talented German and international junior scientists the opportunity to earn a doctorate under excellent research conditions. The research schools are established by one or several Max Planck Institutes. These IMPRS work in close cooperation with universities and other – sometimes international – research institutions. This provides an extraordinary framework for the graduate students to work in, and is a great advantage in interdisciplinary research projects, or in projects that require special equipment.
